INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.
- 13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.
- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.
- 14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

VARIETY: WINTER SUPREME

EXHIBIT A

Origin and Breeding History of the Variety

1. Winter Supreme originated from a hand pollinated cross between Climax and Vanguard. The cross was made in the Salinas Valley of California in 1969.
2. Initial trial plantings were conducted in 1970 to allow for individual plant selections. Several trial plantings followed the initial selection work to allow for segregation and more comprehensive evaluations and selections. Selections were made on the basis of size, color, texture, and resistance to rusty rib (also known as rusty brown discoloration). The procedures involving trial plantings, evaluations, and plant selections were repeated numerous times before the final desirable type was attained. These plantings were conducted in Yuma, Arizona, and the Imperial Valley of California.
3. Winter Supreme is resistant to rusty rib (also known as rusty brown discolorations), genetically uniform and free of any distinct variation.

VARIETY: WINTER SUPREME

EXHIBIT B

Botanical Description of the Variety

1. Annual. A crisp head variety with large size frame and head.
2. Dark green, fairly slow bolting lettuce with black seeds.
3. The leaves are thick and moderately serrated.
4. Head is spherical, butt of plant is slightly ribby.
5. This variety is very similar horticulturally to the variety Climax.
6. For mid-winter harvest in the Imperial Valley of California and Yuma, Arizona. It does not appear to be adapted to the Salinas - Watsonville districts of California.

VARIETY: WINTER SUPREME

EXHIBIT D

Data Indicative of Novelty

Winter Supreme was developed to replace the variety Climax for winter harvest in the Southwestern United States. Its distinguishing feature is that although it closely resembles the variety Climax, it is unique in that it is rusty rib (also known as rusty brown discoloration) resistant. The variety Climax is not resistant to rusty rib.
